Hello Norbert,

Would like to share photos to MHA of a stove that we were building a year ago. The project was consulted with Igor Kuznetsov.

It is quite an extraordinary heater, because of its size, functions and shape.

So, it's a double bell heater working according to rules of Free Gas Movement system. It has a coil for water heating, that is heating 500 l of sanitary water.

Also it has a hot bed and a black oven, size 40x90 cm.

The walls, except hot bed and second bell, are double skin.

The heater is the only one device to heat 200 m2 house. Depending on the temperature outside in wintertime, it's been fired once per day or 2 days.

It's build in eastern Poland by me, Saulius Prabulis, Jarek Truszkowski and Piotr Janiuk.

I added some technical pictures to see better the complicity of the heater and the first fire photo together with the building team.

Best regards,

Saulius Prabulis
