Hey guys,

I built the double bell from the MHA portfolio some five years back for a guy down in Dorset. Used hand made Swanage red bricks and clay that was dug up in the garden for mortar. Visited last week for a check up. In mild coastal winters down South they make two fires per week - the only heat source for the (straw bale wrap up) house plus domestic hot water. Thumbs up. Chimney sweep loves it too.

Few infrareds attached - some 6 hours after burning half a load ,')

Thanks again for continuous inspiration

Cheers

Martin

Quoting Norbert Senf <norbert.senf@gmail.com>:

Hello all:

MHA has a joint project with AFPMA (Masonry Heater Association of France) to develop an open source calculator that includes a wider variety of stoves than the Austrian one.

Damien Lehmann of AFPMA has written a prototype calculator. Currently, we have a project at MHA and at AFPMA to build test heaters and instrument them to generate data for further development and verification of the software.

Attached is a prototype version of the calculator, written in Open Office (free download).

Some further information may be found here:

<http://heatkit.com/research/lopez-2015-new%20lab%20build.htm>

Also attached are some outlines from our discussions with US-EPA.

Best Norbert Senf (chair, MHA Technical Committee)
