**Technical details**

With an efficiency rate of 91% along with low emissions and this combined with Tiileri Arina solution makes Aino a technologically advanced fireplace. Tiileri Aino fireplace is made from special bricks that contain porcelain fragments, this makes the bricks more durable and suitable for fireplace use. Aino fireplace is designed to last decades and because of the special bricks the heat storing capabilities don’t diminish in usage. 1200/1250kg mass assures that the heat is distributed evenly and up to 30 hours. Aino has both connection options; top and down.

Venla Air

The very popular Venla Air was the first fireplace to combine heat storing and convection air to one fireplace. Venla Air is available with mortar finish (multiple colour options) or with ceramic tile finish. Venla Air is smaller than normal heat storing fireplaces making it ideal for smaller houses. Venla Air can be fitted anywhere, even in the middle of the room. The hatch in Venla Air is big for this size of a fireplace and the hatch is available in black or satin chrome. Venla Air is the fireplace for you if you are looking for Scandinavian design masterpiece with excellent heating capabilities.

Technical details

Finnish heat storing fireplaces are famous around the world and now Tiileri has combined to this convection air system. The result of this is a fireplace with excellent heating capabilities. The smoke conductors are divided with a metal tube. This makes it possible that Venla Air blows hot up to 150 degrees) air from top of the fireplace. The convection system starts to produce hot air directly after igniting the fire and continues long after the fire has gone out. Venla Air’s brick core will release heat up to 30 hours. The excellent heat storing capability is achieved by using special bricks that have porcelain fragments in them. Also this fireplace comes with Tiileri Arina system, which guarantees extremely high efficiency rate.

Performance

- Efficiency ratio: 85%
- Heat release: 30h
- Energy output: 49kWh

For full range and images, visit: www.tiileri.fi
Sofia

Sofia fireplace is a timeless classic, which final appearance you decide. The rough brick surface of the Original model fits to many interiors due to the extensive colour options Tiileri has for its bricks. If you are more to modern Scandinavian design, the Funkkis model is for you. For more eye catching finish, the hatches can be changed to satin chrome or to other dazzling options we have. In the Trend model the surface is covered with tiles, that are easy to clean and offer another option to make the fireplace stand out. There’s also an option to change the hatch size to a bigger one.

Technical details

Sofia fireplace has one of the highest efficiency rates, 91%. The special bricks Tiileri uses store heat extremely well and Tiileri Arina solution guarantees that the emissions stay low and the heat releasing efficiency is as high as possible. Due to the fireplaces design, also the flue gas temperature (well under 200 °C) is lower than in many fireplaces out in the market. Therefore, Lauri fireplace fire safety is very high. Safety issues have always been a priority for Tiileri, therefore all our fireplaces are designed so that the surface temperature is very low, making it safe for everyone in the family. The fire safety distance is only 50mm, making Lauri fireplace easy to install in most places. Lauri fireplace releases heat up to 51 hours, making it an ideal heater. Lauri has both connection options; top and down. The sweeping hatches are located in the sides, but can be moved to the front.

Sofia Tunnel

Sofia Tunnel is a two hatched (tunnel) version of the Tiileri classic Sofia fireplace. Sofia Tunnel is especially designed to be a space divider, that creates sense of roominess as there’s hatches on both sides. The fire is visible from both directions. Due the fact that Sofia Tunnel has a tunnel firebox, the firebox is bigger than typically, making it possible to also use it for cooking. Original model fits to many interiors due to the extensive colour options Tiileri has for it’s bricks. If you are more to modern Scandinavian design, the Funkkis model is for you. For more eye catching finish, the hatches can be changed to satin chrome or to other dazzling options we have. In the Trend model the surface is covered with tiles, that are easy to clean and offer another option to make the fireplace stand out. There’s also an option to change the hatch size to a bigger one (Original, Funkkis and Trend models).

Pikku-Lauri is a timeless classic in the Tiileri collection to smaller spaces. Pikku-Lauri can be modified to fit your special needs in order to fit the interior. There’s four completely different looks (Original, Funkkis, Trend and Face) and with various colour options. Even the hatches can be changed to cast iron or steel. The chosen surface material covers all sides, so Pikku-Lauri can even be fitted in the middle of the room. The small size quarantines that it fits almost any room. The narrow but tall appearance of the Pikku-Lauri is definitely a great example of Scandinavian minimalistic design without forgetting the heating capabilities.

### Technical details

Pikku-Lauri uses patented Tiileri Arina solution, that guarantees emission levels to stay low and excellent heat releasing efficiency. The efficiency level of 87% is very high. Pikku-Lauri releases heat up to 46 hours, which is surprisingly high for a fireplace of this size. Just burning one set of woods can create up to 45 Kwh of heat, so Pikku-Lauri is not just a great interior décor, but also an efficient heater. Pikku-Lauri has both connection options; top and down.

Veera Air

Tiileri fireplaces are the original heat storing fireplaces from Scandinavia with over 60 years of experience. By selecting a Tiileri fireplace you receive the best efficiency in the market and the longest heat release time along with safe and pleasant surface temperature.

Veera Air
Colour: Snow
Tile: Smooth white

For full range and images, visit: www.tiileri.fi
Veera Air

Veera Air is an unique combination of heat storing and convection air fireplace. Veera Air is specially designed to fit even smaller spaces without compromising the heating capabilities. You can modify the appearance to your liking by changing the colour and the tiles. The colour options for the metal are, Snow (white), Snag (dark gray) and Aronia (black). The options for the tiles are; smooth white, smooth black and satin white. You can even find your own tiles (size 200x500mm), making the fireplace completely unique. The tile rack can be easily taken if you prefer it.

Colour options

- Snow
- Grey
- Aronia

Ceramic tiles options

- Smooth white 500x200 MM
- Smooth satin 500x200 MM
- Smooth black 500x200 MM

Technical details

Veera Air differs from other fireplaces in the market by heating air and blowing it out instantly after igniting the fire. After the fire has burned out Veera Air continues to blow hot air. This is achieved by having a brick core that stores heat for a long period. There’s no other fireplace in the market like this at the moment. Veera air has a big hatch that has an automatic air intake and that combined with Tiileri Arina system guarantees excellent heating capabilities in this stylish fireplace.
